### Discussion

Friday, July 14, 2000

During decommissioning activities in SET 37, Room 454, Building 777, D&D workers opened the entry door to the horizontal accelerator. Without entering this confined space, workers identified that this structure contained paper, boxes, machine parts and bottles containing liquids. Because of the length of the structure, lack of adequate lighting and the inability to enter the structure, not all items could be accurately identified. The materials that were visible had been placed on shelf like structures that runs the length of the accelerator.

Management invoked Standing Order 65 for the management of unknowns to control access to the area.

I attempted to contact Edd Kray and Cindy Burbach by phone. I was not successful in that attempt but I did leave a message. It is possible that the bottles containing liquids are regulated under the Chemical Consent Order.

An entry plan is being developed.
